Birkhäuser. Paperback. Book Condition: New. Paperback. 324 pages. Dimensions: 9.5in. x 6.7in. x 0.7in.The Bochner-Martinelli integral representation for holomorphic functions orsev- eral complex variables (which has already become classical) appeared in the works of Martinelli and Bochner at the beginning of the 1940s. It was the first essen- tially multidimensional representation in which the integration takes place over the whole boundary of the domain. This integral representation has a universal 1 kernel (not depending on the form of the domain), like the Cauchy kernel in e . However, in en when n 1, the Bochner-Martinelli kernel is harmonic, but not holomorphic. For a long time, this circumstance prevented the wide application of the Bochner-Martinelli integral in multidimensional complex analysis. Martinelli and Bochner used their representation to prove the theorem of Hartogs (Osgood- Brown) on removability of compact singularities of holomorphic functions in en when n 1. In the 1950s and 1960s, only isolated works appeared that studied the boundary behavior of Bochner-Martinelli (type) integrals by analogy with Cauchy (type) integrals. This study was based on the Bochner-Martinelli integral being the sum of a double-layer potential and the tangential derivative of a single-layer potential. Therefore the Bochner-Martinelli integral has a jump that agrees with the integrand, but it behaves like the Cauchy integral under approach to the boundary, that is, somewhat worse than the double-layer potential. Thus, the Bochner-Martinelli integral combines properties of the Cauchy integral and the double-layer potential. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
