

## Elementary lessons with numerical examples in practical mechanics and machine design with an introduction by John Perry

Filesize: 7.54 MB

### ***Reviews***

*Extensive manual! Its this sort of very good study. It is rally fascinating throgh reading time period. I am just pleased to explain how this is actually the finest publication we have go through during my personal life and can be he greatest ebook for actually.*

*(Henri Runolfsdottir)*

## ELEMENTARY LESSONS WITH NUMERICAL EXAMPLES IN PRACTICAL MECHANICS AND MACHINE DESIGN WITH AN INTRODUCTION BY JOHN PERRY

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 58 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 edition. Excerpt: . . . cent. 8. In the case of certain kinds of shafting it is possible to express  $M$  as a multiple of  $T$ . Thus  $M = k T$ . Rankine has found the following values of  $k$ : --For such cases as propeller-shafts  $k$  varies from 25 to 5. For ordinary light shafting in mills. . .  $k = 75$  to 1. And for crank-shafts and other heavy For each of the cases above mentioned deduce the constant  $a$  in the simple formula for the diameter Note. --The values here found agree with values of the multiplier  $c$  given at page 99. 9. Find the two equal stresses (tensile and shear) which combined will produce a resultant tensile stress of 66,000 lb. per sq. inch. 10. A cylindric shaft transmits 30 HP at 150 revolutions per minute, and is subjected to a bending moment equal to the twisting moment; find the diameter of the shaft, if the safe shear stress of the material is 9,000 lb. per sq. inch. ANSWERS. 1. Yes. The resultant stress is 5.6 tons per square inch. 2. 6,057.8 lb. per square inch. 3. 6,428 lb. per square inch LESSON XXIV. OVERHUNG CRANK. CRANK-PINS. LENGTHS OF BEARINGS, ETC. A Very good illustration of combined twisting and bending actions is the case of an overhung crank (Fig. 58). Let  $P$  be the total push, or pull, of the connectingrod at right angles to the direction of the crank. Fig. 68. Then  $T = P \times A \dots$
